## APPENDICES

### Appendix A. Summary of Waste Audit Results

## 1.0 INTRODUCTION

### 1.1 Background

AET Group Inc. (AET) was contracted by the Continuous Improvement Fund (CIF) to compile a report that summarizes the overall waste composition results from nine (9) single-family residential curbside audits and three (3) multi-residential waste audits. Kilogram per household per week (kg/hh/wk) and kilogram per unit per week (kg/unit/wk) generation rates are summarized by material type, season, and municipal group.

The municipalities audited fell into seven (7) of WDO's nine (9) municipal group classifications. The audit results include the following municipal groups: Large Urban, Medium Urban, Small Urban, Rural Collection South, Rural Depot South, Rural Collection North & Rural Regional. The remaining municipal groups that were not part of the 2016/2017 audit program include: Urban Regional and Rural Depot North.

The studies were jointly funded by the CIF and Stewardship Ontario (SO) under the Terms of Reference (TOR) for Single Family Curbside and Multi-Residential Waste Composition Studies, published by Waste Diversion Ontario (Now the Resource Productivity and Recovery Authority - RPRA) in December of 2015. Full details of the TOR may be found at the following link: <http://thecif.ca/waste-composition-studies/>.

## 2.0 METHODOLOGY

### 2.1 Data Collection

Four seasonal 2-week audits were conducted in each municipality over the study period (8 weeks total per municipality). The sample size was 100 households per municipality. The sampled households were pre-selected and remained the same throughout all four seasonal audits. Sampled multi-residential buildings included different number of units for each municipality but the same buildings were audited over the course of 8 weeks total per municipality. Waste was collected, sorted and weighed all garbage, recycling and organics (if applicable) set out by the sample households over the four seasonal audit periods. Materials were collected, sorted and weighed separately by stream and by sample area.

The number of households sampled is adjusted to account for any hauler issues (e.g. material picked up by regular hauler before audit team arrival), resident refusals, or seasonal drop off locations. Although material categories were the same for all audits, a particular materials' classification as recyclable or compostable was dependant on each individual municipality's acceptance criteria.

## 2.2 Calculations

The calculations used to analyze the waste audit results are as follows:

### Total kg/hh/wk:

$$\left( \frac{\text{Total disposed weight (kg)}}{\text{Number of households sampled}} \right) \div \text{generation period(days)} \times 7 \text{ days}$$

### Capture Rate:

$$\left( \frac{\text{Total Recycled(kg)}}{\text{Total Generated(kg)}} \right) \times 100\%$$

### 4-Season Average (kg/hh/wk):

$$\left( \frac{\text{Spring(kg/hh/wk)} + \text{Summer(kg/hh/wk)} + \text{Fall(kg/hh/wk)} + \text{Winter(kg/hh/wk)}}{4} \right)$$

## 3.0 RESULTS AND DISCUSSION

### 3.1 Single Family Residential Curbside Results

The following section summarizes the results of the waste composition calculations. Table 3.1 provides an overview of the waste collection details for the seven (7) municipal groups audited. The results are presented by primary material category, stream (garbage, recycling & organics (if applicable) as well as a cumulative total (all streams combined). Full detailed results can be found in Appendix A, including breakdown by material sub-category and acceptance criteria for the recycling and organics streams.

**Table 3.1 Overview of Single Family Collection Details**

\*Medium Urban has organics collection in partial areas of the municipality. This material was not collected as part of the audit.

#### 3.1.1 Large Urban A

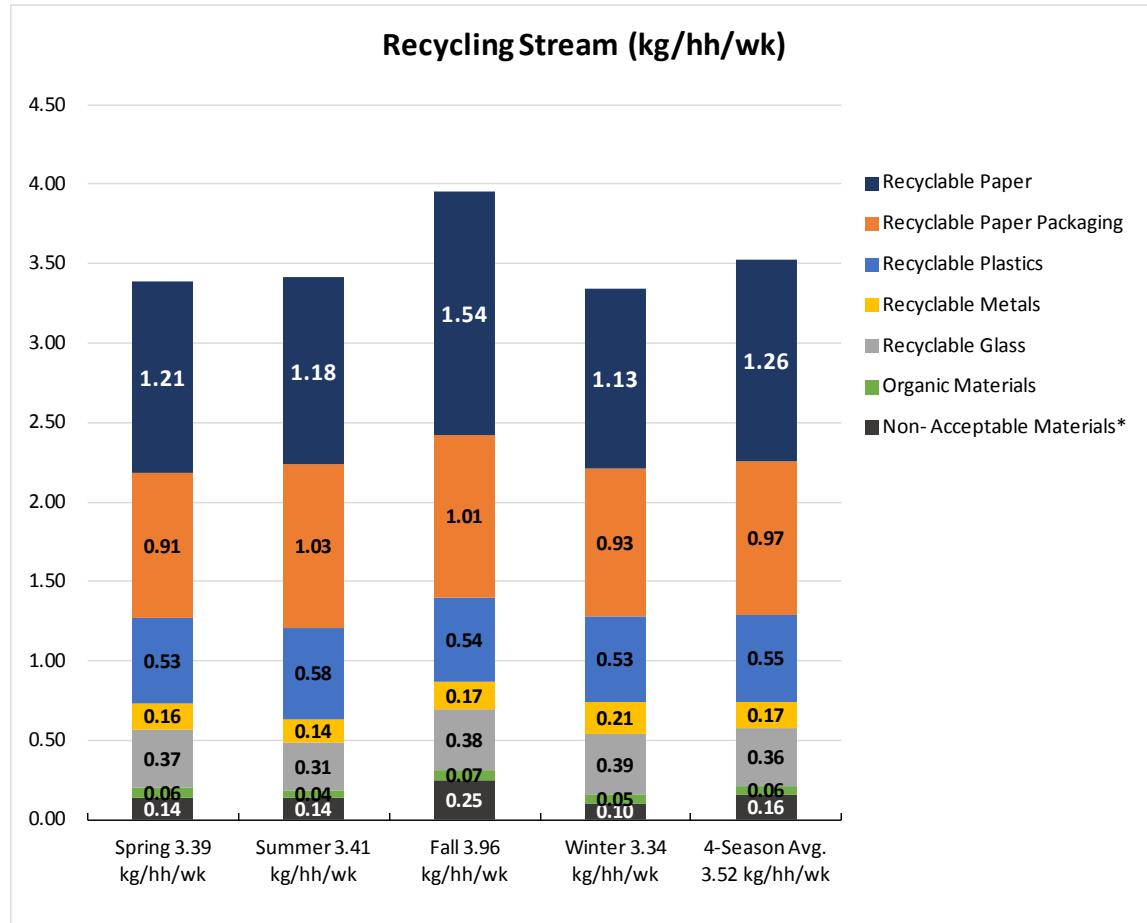

The Large Urban A composition results are based on a municipality that has weekly garbage, weekly recycling and weekly organics program collection. The current garbage collection is limited at one (1) bag/container for each residential unit – additional bags/containers must be tagged at an additional cost. The recycling program is two-stream blue box collection, where residents set out their containers and fibres separately. A standard green bin is used for organics collection.

\*Non-Acceptable Materials are based on this municipality's recycling and organics program acceptance criteria.

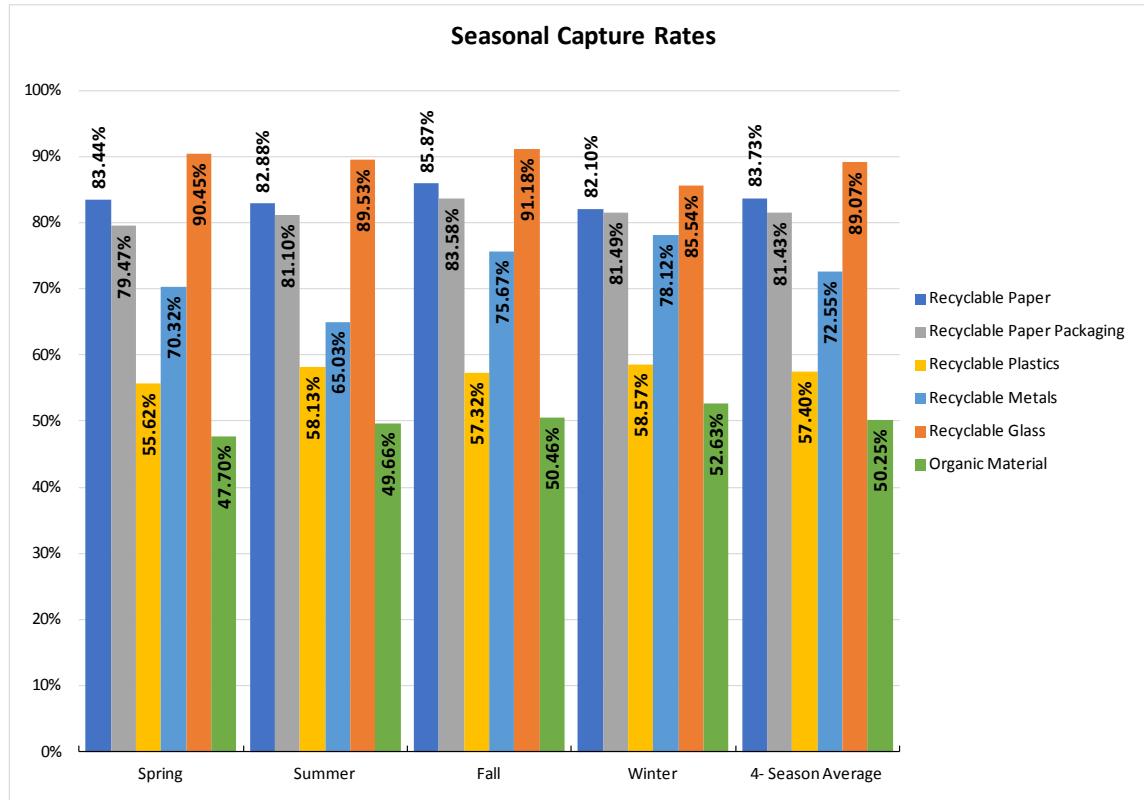

**Figure 3.4 Large Urban A Organics Stream Breakdown (kg/hh/wk)**

\*Non-Acceptable Materials will vary depending on each municipality's organic stream acceptance criteria.

Non-acceptable materials in the organics stream consisted heavily of leaf & yard waste, which is not promoted as being accepted in the curbside green bin program.

**Figure 3.5 Large Urban A Capture Rates**

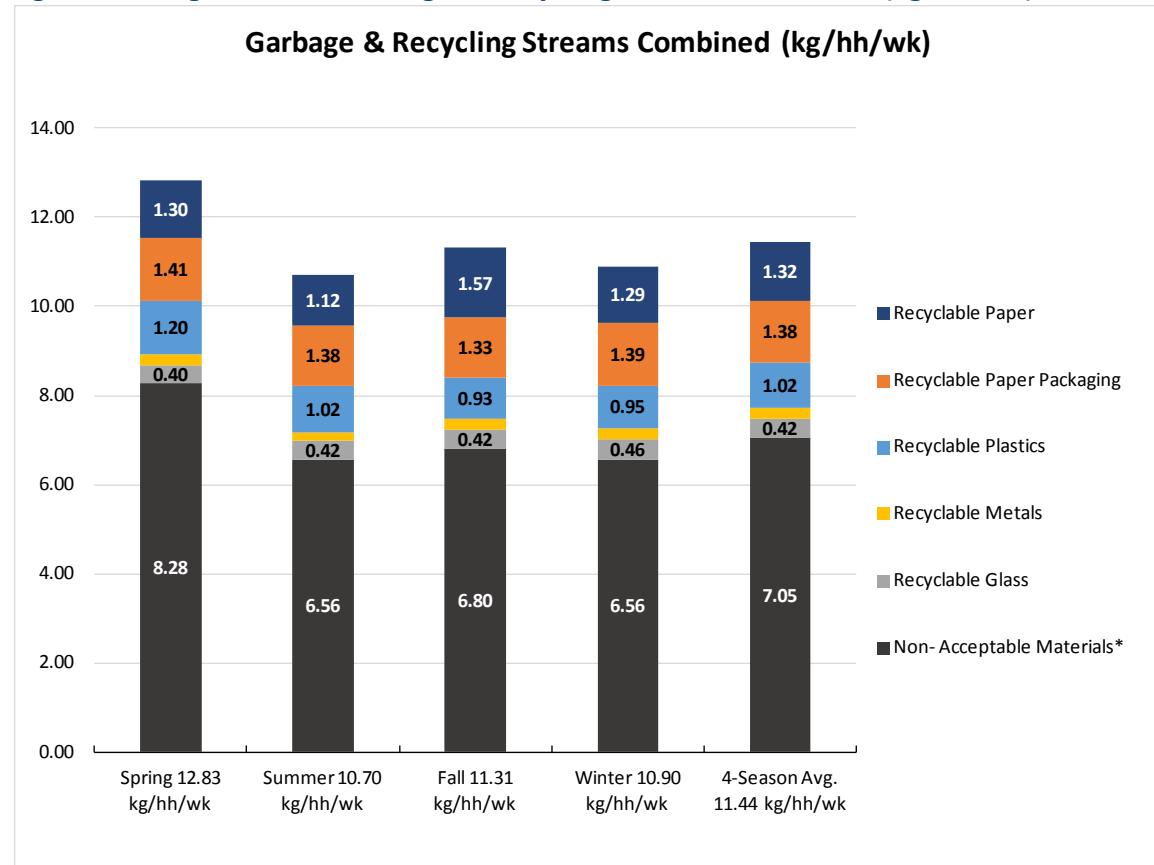

Note: Capture rates for recyclable materials only represent what was captured in the recycling program.

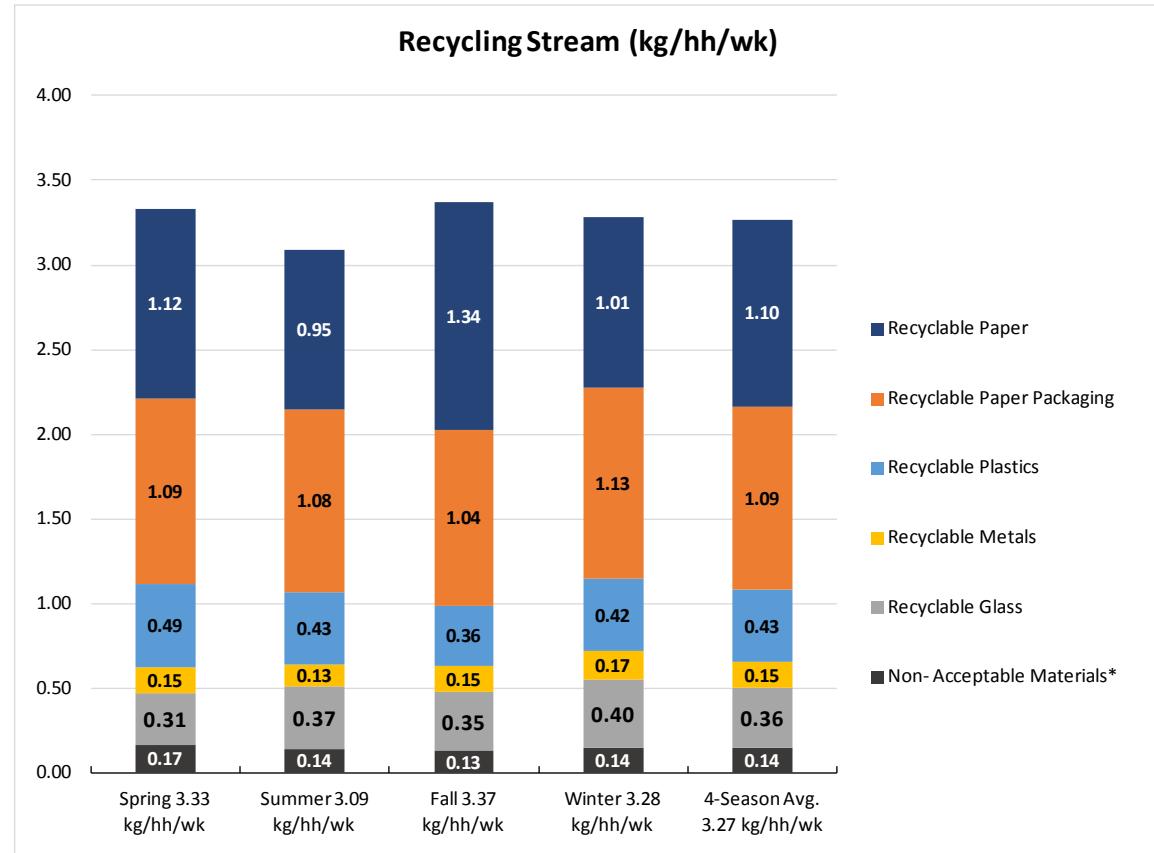

### 3.1.2 Large Urban B

The Large Urban B composition results are based on a municipality that has 8-day garbage and recycling collection. Residents are restricted to a four (4) bag/container limit – bag/container exceedance must be tagged at an additional cost. The recycling program is a two-stream blue box collection, where residents set out their containers and fibres separately.
