## APPENDICES

Appendix A. Summary of Waste Audit Results

## 1.0 INTRODUCTION

### 1.1 Background

AET Group Inc. (AET) was contracted by the Continuous Improvement Fund (CIF) to compile a report that summarizes the overall 2018/2019 waste composition results from seven (7) single-family residential curbside audits, two (2) residential drop-off depot audits and one (1) multi-residential waste audit. Kilogram per household per week (kg/hh/wk) and kilogram per unit per week (kg/unit/wk) generation rates are summarized by material type, season, and municipal group.

The municipalities audited fell into eight (8) of RPRA's nine (9) municipal group classifications. The audit results include the following municipal groups: Large Urban, Urban Regional, Medium Urban, Rural Regional, Rural Collection North, Rural Collection South, Rural Depot North and Rural Depot South. The remaining municipal group that was not part of the 2018/2019 audit program include: Small Urban.

The studies were jointly funded by the CIF and Stewardship Ontario (SO) under the Terms of Reference (TOR) for Single Family Curbside and Multi-Residential Waste Composition Studies, published by Waste Diversion Ontario (Now the Resource Productivity and Recovery Authority - RPRA) in December of 2015. Full details of the TOR may be found at the following link: <http://thecif.ca/waste-composition-studies/>.

## 2.0 METHODOLOGY

### 2.1 Data Collection

Four seasonal 2-week audits were conducted in each municipality over the study period (8 weeks total per municipality). The sample size was 100 households per municipality. The sampled households were pre-selected and remained the same throughout all four seasonal audits. Sampled multi-residential buildings included different number of units for each municipality but the same buildings were audited over the course of 8 weeks total per municipality. Waste was collected, sorted and weighed for all garbage, recycling and organics (if applicable) set out by the sample households over the four seasonal audit periods. Materials were collected, sorted and weighed separately by stream and by sample area.

The Depot sampling was designed to achieve a representative sample of material from an equivalent of 100 households generated over a seven-day period (i.e. 700 household generation days) each season. Auditors were stationed at the depots during regular operating hours where they interviewed residents dropping off garbage and recycling. The auditors would ask the following:

- Is this from a permanent or seasonal residence?
- How many households of material is this from?
- What is the generation period of this material (i.e. how many days of generation)?

The audit team collected samples until the equivalent of 700 household generation days was received. Only residential household garbage and recycling material was accepted (i.e. no commercial, construction/renovation, bulky items).

The number of households sampled is adjusted to account for any hauler issues (e.g. material picked up by regular hauler before audit team arrival), resident opt-out, or seasonal drop off locations. Although material categories were the same for all audits, a particular materials' classification as recyclable or compostable was dependant on each individual municipality's acceptance criteria.

## 2.2 Calculations

The calculations used to analyze the waste audit results are as follows:

### Total kg/hh/wk:

$$\left( \frac{\text{Total disposed weight (kg)}}{\text{Number of households sampled}} \right) \div \text{generation period (days)} \times 7 \text{ days}$$

### Capture Rate:

$$\left( \frac{\text{Total Recycled (kg)}}{\text{Total Generated (kg)}} \right) \times 100\%$$

### 4-Season Average (kg/hh/wk):

$$\left( \frac{\text{Spring (kg/hh/wk)} + \text{Summer (kg/hh/wk)} + \text{Fall (kg/hh/wk)} + \text{Winter (kg/hh/wk)}}{4} \right)$$

## 3.0 RESULTS AND DISCUSSION

### 3.1 Single Family Residential Curbside Results

The following section summarizes the results of the waste composition calculations. Table 3.1 provides an overview of the waste collection details for the seven (7) municipal groups audited. The results are presented by primary material category, stream (garbage, recycling & organics (if applicable) as well as a cumulative total (all streams combined). Full detailed results can be found in Appendix A, including breakdown by material sub-category and acceptance criteria for the recycling and organics streams.

**Table 3.1 Overview of Single Family Collection Details**

Municipal Group	Garbage		Recycling			Organics	
	Collection Frequency	Bag/ Container Limit	Collection Frequency	Type of Collection	Type of Recycling Receptacles	Organics Program in Place?	Collection Frequency
Large Urban	Bi-weekly	Cart System	Bi-weekly	Single-Stream	Cart System	Yes	Weekly
Urban Regional A	Bi-weekly	6 bag/container limit	Bi-weekly	Two-Stream	Blue Box/ Black Box	Yes	Weekly
Urban Regional B*	Bi-weekly	4 bag/container limit	Weekly	Two-Stream	Blue Box	Yes	Weekly
Medium Urban	Weekly	2 bag/container limit, one additional tagged bag/container allowed	Bi-weekly	Two-Stream	Clear/blue Bags	No	-
Rural Regional	Weekly	Bag tags required on all garbage, no limit	Bi-weekly	Two-Stream	Blue Box	No	-
Rural Collection North	Weekly	3 bag/container limit, residents may purchase tags for additional garbage items	Bi-weekly	Two-Stream	Blue Box	No	-
Rural Collection South	Weekly	2 bag/container limit	Bi-weekly	Two-Stream	Blue Box	No	-

\*Urban Regional B has organics collection but this material was not collected and audited as a part of the audit.

### 3.1.1 Large Urban

The Large Urban composition results are based on a municipality that has bi-weekly garbage and recycling collection and weekly organics collection. This municipality operates on the cart system that offers three different sizes of garbage and recycling carts and one size of organics carts. Any excess garbage must be tagged with a garbage tag and unlimited excess recycling can be set-out next to their regular cart. The recycling program is single-stream collection, where residents set out their containers and fibres together.

### 3.1.2 Urban Regional A

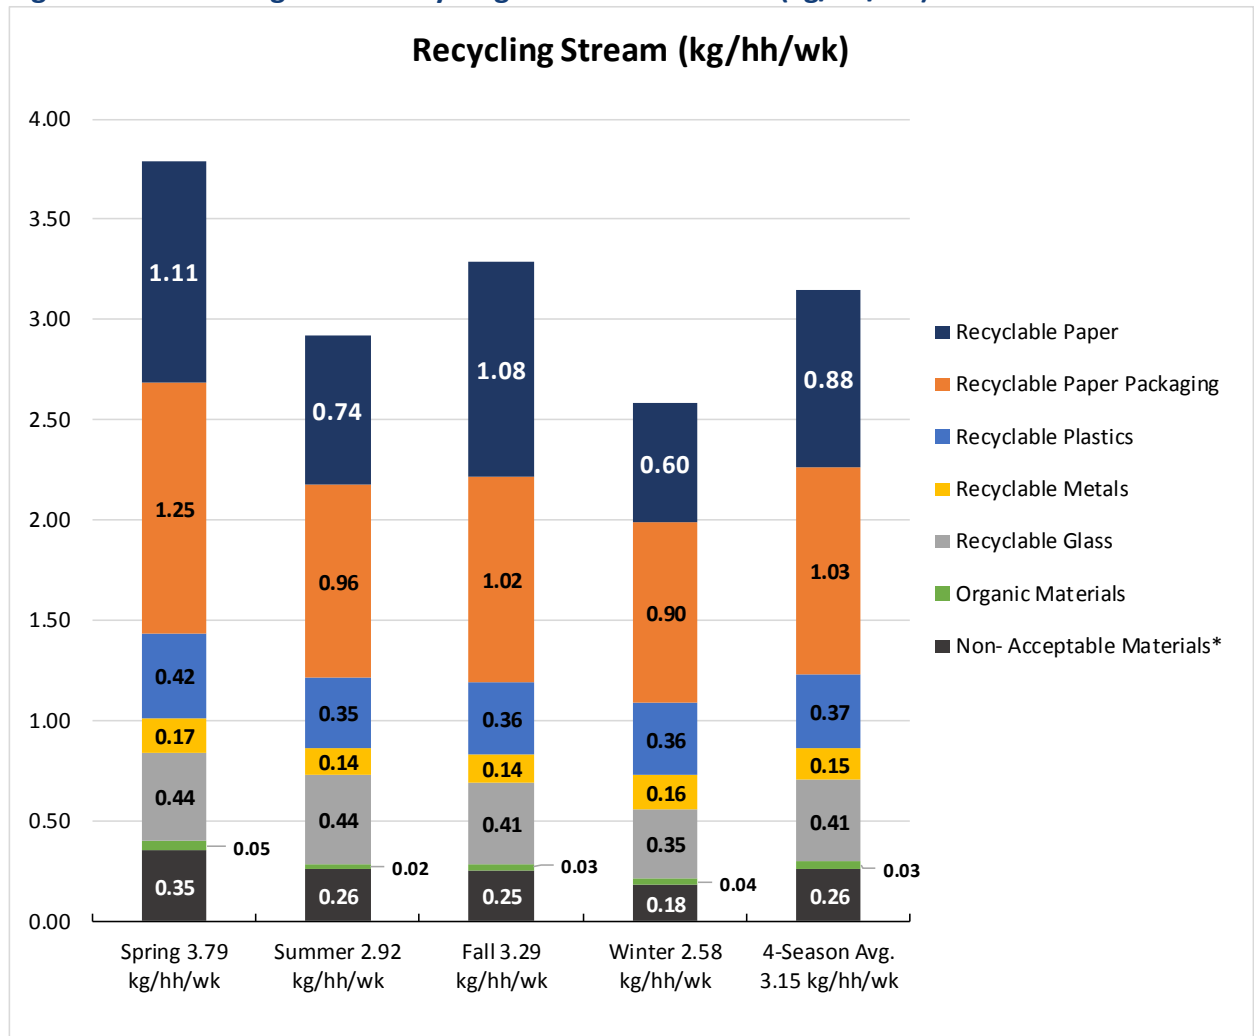

The Urban Regional A composition results are based on a municipality that has biweekly garbage and recycling collection and weekly organics collection. A limit of six (6) bags/containers of garbage is enforced for residents. The recycling program is two-stream blue box collection, where residents set out their containers and fibres separately. Organics is collected on a weekly basis and a standard green bin is used.

Note: Capture rates for recyclable materials only represent what was captured in the recycling program.

### 3.1.3 Urban Regional B

The Urban Regional B composition results are based on a municipality that has biweekly garbage collection and weekly recycling and organics collection. Residents are restricted to four (4) bags/containers of garbage. The recycling program utilizes two-stream blue box collection, where residents set out their containers and fibres separately. The organics stream was not included as a part of the audit.

### 3.1.4 Medium Urban

The Medium Urban composition results are based on a municipality that has weekly garbage collection and biweekly recycling collection. Residents are restricted to two (2) bags/containers of garbage and one additional tagged bag/container. The recycling program utilizes two-stream clear/blue bag collection, where residents set out their containers and fibres separately in bags.

### 3.1.5 Rural Regional

The Rural Regional composition results are based on a municipality that has weekly garbage collection and biweekly recycling collection. Residents must tag all garbage bags or containers for garbage collection. The recycling program is two-stream collection, where residents set out their containers and fibres separately. It should be noted that the samples collected in this municipality were all from an urban area and did not include sampling from the wider rural region.

### 3.1.6 Rural Collection North

The Rural Collection North composition results are based on a municipality that has weekly garbage collection and biweekly recycling collection. Residents are restricted to three (3) bags/containers of garbage. The recycling program utilizes two-stream blue box collection, where residents set out their containers and fibres separately.

### 3.1.7 Rural Collection South

The Rural Collection South composition results are based on a municipality that has weekly garbage collection and biweekly recycling collection. Residents are restricted to two (2) bags/containers of garbage. The recycling program utilizes two-stream blue box collection, where residents set out their containers and fibres separately.

## 3.2 Multi-Residential Waste Composition Results

The following sections summarize the results of the multi-residential waste composition calculations. Table 3.2 provides an overview of the waste collection details for the one (1) municipal group audited. The results are presented by primary material category, stream (garbage & recycling) as well as a cumulative total (all streams combined). Full detailed results can be found in Appendix A, including breakdown by material sub-category and acceptance criteria for the recycling and organics streams.

**Table 3.2 Overview of Multi-Residential Collection Details**

Municipal Group	Garbage		Recycling			Organics	
	Collection Frequency	Collection Receptacles	Collection Frequency	Type of Collection	Type of Recycling Receptacles	Organics Program in Place?	Collection Frequency
Large Urban	Mostly twice a week	Various types ranging from 3-6 cubic yard front-end bins	Weekly	Single-Stream	Various types ranging from 3-6 cubic yard front-end bins and carts	Yes but not for the buildings included in the audit	Weekly

### 3.2.1 Large Urban

The Large Urban composition results are based on a municipality that has garbage collected twice a week for most buildings and recycling collected weekly. Garbage is collected in bins sized 3-6 cubic yards. Recycling is collected in bins sized 3-6 cubic yards and carts. The recycling program is single-stream collection, where residents set out their containers and fibres together.

### 3.3 Residential Drop-Off Depot Results

The following section summarizes the results of the Drop-off Depot waste composition calculations. Table 3.3 provides an overview of the waste collection details for the two (2) municipal groups audited. The results are presented by primary material category, stream (garbage & recycling) as well as a cumulative total (all streams combined). Full detailed results can be found in Appendix A, including breakdown by material sub-category and acceptance criteria for the recycling and organics streams.

Rural Depot North	Drop off	-	Drop off	Recycling station at each depot location	-	No	-
Rural Depot South	Drop off	Only accepts clear township garbage bags, available for one/two dollars each	Drop off	Recycling station at each depot location	-	No	-

#### 3.3.1 Rural Depot North

The Rural Depot North composition results are based on a municipality that has four (4) depot locations that residents can use to deliver their garbage and recycling. Each depot location has recycling stations for residents to use when sorting their recyclables.

**Figure 3.35 Rural Depot North Drop-Off Depot Garbage & Recycling Stream Breakdown (kg/hh/wk)**
